EDUCATION

Louisiana State University **May 2028**
Bachelor of Science, Computer Science and Physics *Baton Rouge, LA*
- **Coursework:** Algorithms, Data Structures, Linear Algebra, Probability & Statistics, Systems Programming, Computer Organization and Design

EXPERIENCE

FAST Enterprises **May 2026 - Aug 2026**
Implementation Consultant Intern *Springfield, IL*
- Cut SQL query latency by over 90% across 100M+ row taxpayer tables in return, mailing, and account subsystems via indexing, query restructuring, and execution-plan analysis.
- Rewrote 20+ legacy VB.NET services in C#, improving code maintainability and execution speed across enterprise tax modules
- Resolved 20+ production defects during a live GenTax rollout for the Illinois Department of Revenue, including one critical Core GenTax issue, while configuring and deploying state-specific regulatory workflows.

PROJECTS

BirdPop | Python, NumPy, SciPy Github **Mar 2026 - May 2026**
- Applied statistical modeling, back-testing, and numerical stability checks to a 600k observation dataset, isolating urbanization effects by taxon while controlling for citizen-science sampling bias.
- Designed a modular acquisition, geospatial-processing, and statistical-analysis pipeline in Python, decoupling stages via intermediate Parquet/JSON artifacts for independent testing and reruns.
- Classified 600k+ geospatial points as urban/non-urban from WorldPop raster data, deriving a latitude-adjusted area correction (spherical trigonometry) to normalize pixel-level density globally.
- Built an API ingestion layer with rate limiting, pagination, and chunked streaming writes for a 600k+ record dataset, reducing memory footprint via on-disk persistence.

PrintIt | Java, Apache Maven, JavaFX Github **Dec 2025 - Aug 2026**
- Architected a JavaFX desktop app that cut label-printing time by 50% for an active retail business, replacing manual filesystem searches with a searchable, categorized SQLite-backed label catalog.
- Designed a cross-platform CI/CD release pipeline in GitHub Actions, removing error-prone, OS-dependent manual packaging steps.

LEADERSHIP & INVOLVEMENT

Google Developers Student Club **Aug 2025 - Present**
Webmaster *Baton Rouge, LA*
- Built and maintained full-stack web applications for a 100+ member community, automating event check-ins and member tracking across 20+ technical workshops and events.
- Co-organized campus-wide hackathons with organizations like SASE, leading event logistics, venue scheduling, and developer marketing for 100+ student attendees.

TECHNICAL SKILLS

- **Languages**: C++, Python, Java, Rust, C#, Go, JavaScript/TypeScript, SQL (SQL Server)
- **Systems & Tools**: Linux, Git, Docker, Bash, PowerShell, Tmux, zsh, Networking, Proxmox, Nginx
- **Frameworks & Libraries**: React, Node.js, Svelte, JavaFX, Three.js, Firebase, PyTorch, NumPy, SciPy, Matplotlib, PyQt6
- **Quantitative Methods & Algorithms**: Algorithms & Data Structures, Probability & Statistics, Linear Algebra
